

TREK LIME COASTING BIKE

Product Fact Sheet

What is Lime?

Lime is Trek Bicycle Corporation's coasting model, the best coasting bike available. It is available in two versions, the fully accessorized Lime or the simpler Lime Lite.

What is a coasting bike?

A coasting bike is designed for the casual rider – the novice or returning bike rider – who is interested in biking for recreation and convenience purposes, not for fitness or competition. Lime incorporates Shimano's 3-speed automatic transmission system that uses a computer to shift gears based on the bike's speed. A coaster style brake is just like the pedal brakes on the bikes we rode as kids. Pedal forward and you go, pedal backwards and you stop. Those features, combined with an upright riding position and virtually maintenance-free mechanics make Lime the most comfortable, simplest and easiest to use bike on the market.
